ReNest

PROJECT GUIDE

Moving home should be easier, more sustainable and more affordable.

ReNest helps households in Hong Kong's Northern Metropolis plan a new home around the furniture they already own, then consider additions that suit their needs, space and budget.

TRACK	Sustainable Northern Metropolis
TEAM	Renest | Yijia Ma, Buzhuo Yang, Xinqi Wang, Yanqin Guo
UNIVERSITY	The Hong Kong University of Science and Technology

REVIEW THE SUBMISSION

01 Pitch deck

1064 - Renest.pptx

13 slides covering the solution, workflow, AI architecture, business model and impact. Includes five embedded demonstration videos.

02 Product demonstration

1064 - Renest.mp4

The full product narrative, with English narration and subtitles.
3 min 29 sec | 1920 x 1080 | 60 fps

Desktop PowerPoint is recommended for embedded videos; the full demo is available as an MP4.

Code and documentation

For the demo, use a desktop browser with WebGL support and an internet connection.

PROJECT WORKFLOW

Start with the furniture you want to keep. AI helps plan layouts around your household needs, budget and room dimensions. Compare the options and adjust furniture placement to suit your new home.

Explore new and second-hand options by function, dimensions and budget. Preview additions in the home model to see how they fit before making a choice.

REUSE FIRST

Keep useful furniture. Make second-hand options easier to find. Buy only what the next home needs. Actual reuse and environmental benefits will require future evaluation.
